HEMOPHILIA ACTION PLAN

MUST BE RENEWED AT THE BEGINNING OF EACH SCHOOL YEAR

Hemophiliacs are missing one of the clotting factors in their blood. They do not bleed faster than other people, but they may bleed longer.

Present Medication: Dose Time

Medication_____ _____ _____ am / pm

Medication_____ _____ _____ am / pm

Educational Implications:

Injuries:

- Immediate first-aid for any injury is required. Unless the injury is very minor, the student may require medical treatment to stop the bleeding.
- Pain and swelling around the throat and neck area can be more serious than appears, because swelling in this area can obstruct the air passage.
- Notify the parent/guarding so appropriate treatment can be obtained.
- If the parent/guardian cannot be reached, call the student's physician for advice.
- Complete an accident report.

Head Injuries:

- Give immediate first-aid if the student every receives a blow to the head.
- Notify the parent/guardian so appropriate treatment can be obtained, even if there are not obvious signs of bleeding.
- If the parent/guardian cannot be reached, call the student's physician for advice.
- Complete an accident report.

Spontaneous Bleeding:

- Notify the parent/guardian if the student ever complains of pain in muscles, joints, or limbs or holds a body part stiff.
