## TOWNSHIP OF UNION PUBLIC SCHOOLS

Honors Pre-Calculus Adopted June 17, 2015<br>Updated February 18, 2020

## District Mission Statement

The Township of Union Board of Education believes that every child is entitled to an education, designed to meet his or her individual needs, in an environment that is conducive to learning. State standards, federal and state mandates, and local goals and objectives, along with community input, must be reviewed and evaluated on a regular basis to ensure that an atmosphere of learning is both encouraged and implemented. Furthermore, any disruption to or interference with a healthy and safe educational environment must be addressed, corrected, or, when necessary, removed, in order for the district to maintain the appropriate educational setting.

## District Philosophy Statement

The Township of Union Public School District, as a societal agency, reflects democratic ideals and concepts through its educational practices. It is the belief of the Board of Education that a primary function of the Township of Union Public School System is the formulation of a learning climate conducive to the needs of all students in general, providing therein for individual differences. The school operates as a partner with the home and community.

## Course Description

The purpose of this course is to provide students with a working knowledge of trigonometry, a sampling of discrete mathematics topics, and an introduction to calculus topics to prepare them for future courses in mathematics.

Students will apply their reasoning abilities when recognizing patterns, making generalizations, and drawing logical conclusions. Students will use these skills in other disciplines and in real-life situations. They will use technology to evaluate and validate solutions.

## Recommended Textbooks:

Precalculus: Graphical, Numerical, Algebraic Authors: Demana, Waits, Foley and Kennedy

## Curriculum Units

Unit 1: Polynomial Functions
Unit 2: Angles and Trigonometric Functions
Unit 3: Applications of Trigonometric Functions
Unit 4: Matrices
Unit 5: Vectors and Polar Coordinates
Unit 6: Conic Sections
Unit 7: Differentiation and Integration

## Pacing Guide

Content Number of Days
Unit 1: POLYNOMIAL FUNCTIONS ..... 45
Unit 2: ANGLES AND TRIGONOMETRIC FUNCTIONS ..... 45
Unit 3: APPLICATIONS OF TRIGONOMETRIC FUNCTIONS ..... 15
Unit 4: MATRIX ALGEBRA ..... 15
Unit 5: VECTORS AND POLAR COORDINATES ..... 15
Unit 6: CONIC SECTIONS ..... 15
Unit 7: DIFFERENTIATION AND INTEGRATION ..... 10

## Unit 1 (ANALYZING POLYONOMIAL FUNCTIONS)

| NJSLS | NJSLS Content | Learning Activities |
| :---: | :---: | :---: |
| A-APR-1 | Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials. | Homework review |
| A-APR-2 | Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number $a$, the remainder on division by $x-a$ is $p(a)$, so $p(a)=0$ if and only if $(x-a)$ is a factor of $p(x)$. |  |
| A-APR-3 | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial. |  |
| A-APR-4 | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x 2+y 2) 2=(x 2-y 2) 2+(2 x y) 2$ can be used to generate Pythagorean triples. | Direct instruction (board notes/presentations) |
| A-APR-5 | $(+)$ Know and apply the Binomial Theorem for the expansion of $(x+y) \mathrm{n}$ in powers of $x$ and $y$ for a positive integer $n$, where $x$ and $y$ are any numbers, with coefficients determined for example by Pascal's Triangle. | Guided and independent practice |
| F-IF-1 | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$. The graph of $f$ is the graph of the equation $y=f(x)$. | Flipped classroom |
| F-IF-2 | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context. |  |

| F-IF-3 | Recognize that sequences are functions, sometimes defined recursively, whose <br> domain is a subset of the integers. For example, the Fibonacci sequence is defined <br> recursively by $f(0)=f(1)=1, f(n+1)=f(n)+f(n-1)$ for $n \geq 1$. |
| :---: | :--- |
| F-IF-4 | For a function that models a relationship between two quantities, interpret key <br> features of graphs and tables in terms of the quantities, and sketch graphs showing <br> key features given a verbal description of the relationship. Key features include: <br> intercepts; intervals where the function is increasing, decreasing, positive, or <br> negative; relative maximums and minimums; symmetries; end behavior; and <br> periodicity. $\star$ |
| F-IF-5 | Relate the domain of a function to its graph and, where applicable, to the <br> quantitative relationship it describes. For example, if the function h(n) gives the <br> number of person-hours it takes to assemble $n$ engines in a factory, then the <br> positive integers would be an appropriate domain for the function. $\star$ |
| F-IF-6 | Calculate and interpret the average rate of change of a function (presented <br> symbolically or as a table) over a specified interval. Estimate the rate of change <br> from a graph. $\star$ |
| F-IF-7 | Graph functions expressed symbolically and show key features of the graph, by <br> hand in simple cases and using technology for more complicated cases. $\star$ <br> a. Graph linear and quadratic functions and show intercepts, maxima, and minima. <br> b. Graph square root, cube root, and piecewise-defined functions, including step <br> functions and absolute value functions. <br> c. Graph polynomial functions, identifying zeros when suitable factorizations are <br> available, and showing end behavior. <br> d. (+) Graph rational functions, identifying zeros and asymptotes when suitable <br> factorizations are available, and showing end behavior. <br> e. Graph exponential and logarithmic functions, showing intercepts and end <br> behavior, and trigonometric functions, showing period, midline, and amplitude. |

Unit 1 Proficiencies

## Students will be able to

- ANALYZE POLYNOMIAL FUNCTIONS
- FIND THE INVERSE OF POLYNOMIAL FUNCTIONS
- DETERMINE IF THE INVERSE IS A FUNCTION?

## Suggested Differentiation for Unit 1

- Tier 1 Learners:
- Have guided notes filled out at different levels according to ability.
- Give assignments that contain tasks of varying difficulty. Each task should focus on essential learning that all students should master, but the tasks will vary in difficulty.
- Group students by similar interest when working on application problems.
- Use mini lessons to reteach to those having difficulty.
- Group students so that each group contains all level learners. The tier 3 learners can serve as peer helpers.
- Assign a basic homework assignment. Require students to spend a set amount of time to work (showing effort) on the assignment rather than completing the entire assignment.
- Allow students to choose a method for completing a project: video, PowerPoint, paper, or presentation.
- Tier 2 Learners:
- Utilize foldables creating tangible products to help students digest information while incorporating several of the multiple intelligences.
- Tier 3 Learners:
- Have problems posted around the room. Have students loop to specific questions based on difficulty.

## Curriculum Resources

- Textbook - Precalculus: Graphical, Numerical, Algebraic

Short constructed responses

## Summative Assessments

Quiz
Chapter Test
Projects

Physics: Rates of change can be applied to motion, electricity, heat, light, and astronomy.

## Unit 2 ANGLES AND TRIGONOMETRIC FUNCTIONS

| NJSLS | NJSLS Content | Learning Activities |
| :---: | :---: | :---: |
| F-TF-1 | Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle. |  |
| F-TF-2 | Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle. |  |
| F-TF-3 | (+) Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi / 3, \pi / 4$ and $\pi / 6$, and use the unit circle to express the values of sine, cosine, and tangent for $\pi-x, \pi+x$, and $2 \pi-x$ in terms of their values for $x$, where $x$ is any real number. | Homework review <br> Direct instruction (board notes/presentations) <br> Guided and independent practice |
| F-TF-4 | $(+)$ Use the unit circle to explain symmetry (odd and even) and periodicity of trigonometric functions. | Investigation activities <br> Flipped classroom |
| F-TF-5 | Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline |  |
| F-TF-6 | (+) Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse |  |

|  | to be constructed. |
| :---: | :--- |
| F-TF-7 | (+) Use inverse functions to solve trigonometric equations that <br> arise <br> in modeling contexts; evaluate the solutions using technology, <br> and <br> interpret them in terms of the context. $\star$ |
| F-TF-8 | Prove the Pythagorean identity $\sin 2(\theta)+\cos 2(\theta)=1$ and use it <br> to find <br> sin $(\theta), \cos (\theta)$, or $\tan (\theta)$ given $\sin (\theta), \cos (\theta)$, or $\tan (\theta)$ and the <br> quadrant <br> of the angle. |
| F-TF-9 | $(+)$ Prove the addition and subtraction formulas for sine, <br> cosine, and <br> tangent and use them to solve problems. |

## Unit 2 Proficiencies

Students will be able to:

- USE TRIGONOMETRIC FUNCTONS AND THEIR RELATION TO THE UNIT CIRCLE, RIGHT TRIANGLES AND ANGLES

## Suggested Differentiation for Unit 2

- Tier 1 Learners:
- Have guided notes filled out at different levels according to ability.
- Give assignments that contain tasks of varying difficulty. Each task should focus on essential learning that all students should master, but the tasks will vary in difficulty.
- Group students by similar interest when working on application problems.
- Use mini lessons to reteach to those having difficulty.
- Group students so that each group contains all level learners. The tier 3 learners can serve as peer helpers.
- Assign a basic homework assignment. Require students to spend a set amount of time to work (showing effort) on the assignment rather than completing the entire assignment.
- Allow students to choose a method for completing a project: video, PowerPoint, paper, or presentation.
- Tier 2 Learners:
- Utilize foldables creating tangible products to help students digest information while incorporating several of the multiple intelligences.
- Tier 3 Learners:
- Have problems posted around the room. Have students loop to specific questions based on difficulty.

A SHORELINE RUNS NORTH-SOUTH, AND A BOAT IS DUE EAST OF THE SHORELINE. THE BEARINGS OF THE BOAT FROM TWO POINTS ON THE SHORE ARE $110^{\circ}$ AND $100^{\circ}$. ASSUME THE TWO POINTS ARE 550 FT APART. HOW FAR IS THE BOAT FROM THE SHORE?

A POINT ON THE TIP OF A TUNING FORK VIBRATES IN HARMONIC MOTION DESCRIBED BY THE EQUATION d=14 $\sin (\mathrm{wt})$.
$\square$

## Unit 4 (VECTORS)

| NJSLS | NJSLS Content | Learning Activities |
| :--- | :--- | :---: |
| N-VM-1 | (+) Recognize vector quantities as having both magnitude <br> and <br> direction. Represent vector quantities by directed line <br> segments, and use appropriate symbols for vectors and their <br> magnitudes (e.g., $v,\|v\|,\\|v\\|, v)$. |  |
| N-VM-2 | (+) Find the components of a vector by subtracting the <br> coordinates of an initial point from the coordinates of a <br> terminal point. | Homework review |
| N-VM-3 | (+) Solve problems involving velocity and other quantities <br> that can be represented by vectors. | Direct instruction (board notes/presentations) |
| N-VM-4 | (+) Add and subtract vectors. <br> a. Add vectors end-to-end, component-wise, and by the <br> parallelogram rule. Understand that the magnitude of a sum <br> of <br> two vectors is typically not the sum of the magnitudes. <br> b. Given two vectors in magnitude and direction form, <br> determine the magnitude and direction of their sum. |  |

|  | c. Understand vector subtraction $\boldsymbol{v}-\boldsymbol{w}$ as $\boldsymbol{v}+(-\boldsymbol{w})$, where $-\boldsymbol{w}$ is the additive inverse of $\boldsymbol{w}$, with the same magnitude as $\boldsymbol{w}$ and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise. | Flipped classroom |
| :---: | :---: | :---: |
| N-VM-5 | (+) Multiply a vector by a scalar. <br> a. Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as $c(v \mathrm{x}, v \mathrm{y})=(c v \mathrm{x}$, $c v y$ ). <br> b. Compute the magnitude of a scalar multiple $c v$ using $\\|c v\\|$ $=\|c\| \nu$. <br> Compute the direction of $c v$ knowing that when $\|c\| v \neq 0$, the direction of $c v$ is either along $v$ (for $c>0$ ) or against $\boldsymbol{v}$ (for $c$ <0). |  |

## Unit 4 Proficiencies

Students will be able to:

- To use vectors to solve force problems
- USE POLAR COORDINATES TO SOLVE PROBLEMS IN 3 DIMENSIONAL SPACE.

## Suggested Differentiation for Unit 4

- Tier 1 Learners:
- Have guided notes filled out at different levels according to ability.
- Give assignments that contain tasks of varying difficulty. Each task should focus on essential learning that all students should master, but the tasks will vary in difficulty.

## Interdisciplinary Connections/Technology

Physics: To use vectors to solve force problems
Astronomy: USE POLAR COORDINATES TO SOLVE PROBLEMS IN 3 DIMENSIONAL SPACE.

## Unit 5 (MATRICES)

| NJSLS | NJSLS Content | Learning Activities |
| :--- | :--- | :---: |
| N-VM-6 | (+) Use matrices to represent and manipulate data, e.g., to <br> represent payoffs or incidence relationships in a network. |  |
| N-VM-7 | (+) Multiply matrices by scalars to produce new matrices, <br> e.g., as when all of the payoffs in a game are doubled. |  |
| N-VM-8 | (+) Add, subtract, and multiply matrices of appropriate <br> dimensions. |  |
| N-VM-9 | (+) Understand that, unlike multiplication of numbers, matrix <br> multiplication for square matrices is not a commutative <br> operation, but still satisfies the associative and distributive <br> properties. | Homework review |
| N-VM-10 | (+) Understand that the zero and identity matrices play a role <br> in matrix addition and multiticlication similar to the role of 0 <br> and 1 in the real numbers. The determinant of a square matrix |  |

|  | is nonzero if and only if the matrix has a multiplicative <br> inverse. | Guided and independent practice |
| :--- | :--- | :---: |
| N-VM-11 | (+) Multiply a vector (regarded as a matrix with one column) <br> by a matrix of suitable dimensions to produce another vector. <br> Work with matrices as transformations of vectors. | Flipped classroom |
| N-VM-12 | (+) Work with $2 \times 2$ matrices as transformations of the plane, <br> and interpret the absolute value of the determinant in terms of <br> area. |  |

## Unit 5 Proficiencies

## Students will be able to:

- TO USE MATRICES TO ORGANIZE, MANIPULATE AND DISPLAY INFORMATION

## Suggested Differentiation for Unit 5

- Tier 1 Learners:
- Have guided notes filled out at different levels according to ability.
- Give assignments that contain tasks of varying difficulty. Each task should focus on essential learning that all students should master, but the tasks will vary in difficulty.
- Group students by similar interest when working on application problems.
- Use mini lessons to reteach to those having difficulty.
- Group students so that each group contains all level learners. The tier 3 learners can serve as peer helpers.
- Assign a basic homework assignment. Require students to spend a set amount of time to work (showing effort) on the assignment rather than completing the entire assignment.
- Allow students to choose a method for completing a project: video, PowerPoint, paper, or presentation.
- Tier 2 Learners:
- Utilize foldables creating tangible products to help students digest information while incorporating several of the multiple intelligences.
- Tier 3 Learners:
- Have problems posted around the room. Have students loop to specific questions based on difficulty.

Unit 7 (DIFFERENTIATION AND INTEGRATION)

| NJSLS | NJSLS Content | Learning Activities |
| :---: | :--- | :--- |
| 12.F-IF.A.2 | Use function notation, evaluate functions for inputs in their <br> domains, and interpret statements that use function notation in <br> terms of a context. | Homework review |
| 12.F-IF.B.4 | For a function that models a relationship between two quantities, <br> interpret key features of graphs and tables in terms of the <br> quantities, and sketch graphs showing key features given a <br> verbal description of the relationship. Key features include: <br> intercepts; intervals where the function is increasing, decreasing, <br> positive, or negative; relative maximums and minimums; <br> symmetries; end behavior; and periodicity. | Direct instruction (board <br> notes/presentations) |
| Guided and independent <br> practice |  |  |

| 12.F-IF.B.5 | Relate the domain of a function to its graph and, where <br> applicable, to the quantitative relationship it describes. For <br> example, if the function h(n) gives the number of person hours <br> it takes to assemble $n$ engines in a factory, then the positive <br> integers would be an appropriate domain for the function | Investigation activities |
| :---: | :--- | :--- |
| Flipped classroom |  |  |
| 12.F-IF.B.6 | Calculate and interpret the average rate of change of a function <br> (presented symbolically or as a table) over a specified interval. |  |
| 12.F-IF.C.9 | Compare properties of two functions each represented in a <br> different way (algebraically, graphically, numerically in tables, <br> or by verbal descriptions). |  |
| 12.F-LE.A.1.a | Prove that linear functions grow by equal differences over equal <br> intervals and that exponential functions grow by equal factors <br> over equal intervals. |  |

## Unit 7 Proficiencies

## Students will be able to:

- HOW DIFFERENTIAL AND INTEGRAL CALCULUS HELP US MAKE DECISIONS?

## Suggested Differentiation for Unit 7

- Tier 1 Learners:
- Have guided notes filled out at different levels according to ability.
- Give assignments that contain tasks of varying difficulty. Each task should focus on essential learning that all students should master, but the tasks will vary in difficulty.
- Group students by similar interest when working on application problems.
- Use mini lessons to reteach to those having difficulty.
- Group students so that each group contains all level learners. The tier 3 learners can serve as peer helpers.

Assign a basic homework assignment. Require students to spend a set amount of time to work (showing effort) on the assignment rather than completing the entire assignment.

- Allow students to choose a method for completing a project: video, PowerPoint, paper, or presentation.
- Tier 2 Learners:
- Utilize foldables creating tangible products to help students digest information while incorporating several of the multiple intelligences.

## Interdisciplinary Connections/Technology

Economics: Calculus can reduce production costs and optimize profits.
Epidemiology: The rate at which a disease spreads and how far it spreads can be modeled and analyzed using calculus.
Medicine: Medicine dosage rates can be modeled using differential equation.

## Additional Suggested Modifications for Units

Below is an additional list of modifications and accommodations opportunities. This includes, but is not limited to,:

1. English Language Learners.
a. Read written instructions.
b. Model and provide examples
c. Extended time on assessments when needed.
d. Establish a non-verbal cue to redirect student when not on task.
e. Students may use a bilingual dictionary.

English Language Development Standard 3: Language of Mathematics: English language learners communicate information, ideas and concepts necessary for academic success in the content area of mathematics.
2. Special Education/504 Students.
a. Extended time on assessments when needed.
b. Preferred seating to be determined by student and teacher.
c. Provide modified assessments when necessary.
d. Student may complete assessments in alternate setting when requested.
e. Establish a non-verbal cue to redirect student when not on task.
f. Maintain strong teacher / parent communication.
g. Conversion chart

## New Jersey Student Learning Standards - Technology

8.1 Educational Technology: All students will use digital tools to access, manage, evaluate, and synthesize information in order to solve problems individually and collaborate and to create and communicate knowledge.
A. Technology Operations and Concepts: Students demonstrate a sound understanding of technology concepts, systems and operations
B. Creativity and Innovation: Students demonstrate creative thinking, construct knowledge and develop innovative products and process using technology.
C. Communication and Collaboration: Students use digital media and environments to communicate and work collaboratively, including at a distance, to support individual learning and contribute to the learning.

E: Research and Information Fluency: Students apply digital tools to gather, evaluate, and use information.
F: Critical thinking, problem solving, and decision making: Students use critical thinking skills to plan and conduct research, manage projects, solve problems, and make informed decisions using appropriate digital tools and resources.

## *See Guide for Technology Integration.

## Career Readiness Practices

- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8.Utilizecriticalthinkingtomakesense of problems andpersevereinsolvingthem.
- CRP11. Use technology to enhance productivity.

NJSLS 9.2 - Career Awareness, Exploration, and Preparation
9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.

[^0]:    - Group students by similar interest when working on application problems.
    - Use mini lessons to reteach to those having difficulty.
    - Group students so that each group contains all level learners. The tier 3 learners can serve as peer helpers.
    - Assign a basic homework assignment. Require students to spend a set amount of time to work (showing effort) on the assignment rather than completing the entire assignment.
