

TOWNSHIP OF UNION PUBLIC SCHOOLS

UHS – Honors Geometry

Adopted June 20, 2017

Updated December 18, 2018

Mission Statement

The mission of the Township of Union Public Schools is to build on the foundations of honesty, excellence, integrity, strong family, and community partnerships. We promote a supportive learning environment where every student is challenged, inspired, empowered, and respected as diverse learners. Through cultivation of students' intellectual curiosity, skills and knowledge, our students can achieve academically and socially, and contribute as responsible and productive citizens of our global community.

Philosophy Statement

The Township of Union Public School District, as a societal agency, reflects democratic ideals and concepts through its educational practices. It is the belief of the Board of Education that a primary function of the Township of Union Public School System is to formulate a learning climate conducive to the needs of all students in general, providing therein for individual differences. The school operates as a partner with the home and community.

Course Description

This course includes the topics: the language of geometry, reasoning and introduction to proof, parallels, congruent triangles and quadrilaterals. Scientific calculators will be used throughout the course. This course continues with the study of similar figures, right triangles, trigonometry, circles, probability and statistics, polygons and their areas, surface area and volume of prisms, pyramids, cylinders, cones, and spheres.

Recommended Program:

Agile Mind

Unit 1: Congruence and Construction

Unit 2: Congruence, Similarity & Proof

Unit 3: Trigonometric Ratios & Geometric Equations

Unit 4: Geometric Modeling

I. Unit Standards Overview

Overview	Standards for Mathematical Content		Unit Focus	Standards for Mathematical Practice
<u>Unit 1</u> Congruence and Constructions	<input type="checkbox"/> G.CO.A.1 <input type="checkbox"/> G.CO.A.2 <input type="checkbox"/> G.CO.A.3 <input type="checkbox"/> G.CO.A.4 <input type="checkbox"/> G.CO.A.5	<input checked="" type="checkbox"/> G.CO.B.6 <input checked="" type="checkbox"/> G.CO.B.7 <input checked="" type="checkbox"/> G.CO.B.8 <input type="checkbox"/> G.CO.D.12 <input type="checkbox"/> G.CO.D.13	<ul style="list-style-type: none"> • Experiment with transformations in the plane • Understand congruence in terms of rigid motions • Make geometric constructions 	<p>MP.1 Make sense of problems and persevere in solving them.</p> <p>MP.2 Reason abstractly and quantitatively.</p> <p>MP.3 Construct viable arguments & critique the reasoning of others.</p> <p>MP.4 Model with mathematics.</p> <p>MP.5 Use appropriate tools strategically.</p> <p>MP.6 Attend to precision.</p> <p>MP.7 Look for and make use of structure.</p> <p>MP.8 Look for and express regularity in repeated reasoning.</p>

I. Units

Unit 1

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p><input type="checkbox"/> G.CO.A.1. Know precise definitions of angle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, and distance along a line</p>	<p>MP.6 Attend to precision.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Point, line, plane, and distance along a line, as indefinable notions <p>Students are able to:</p> <ul style="list-style-type: none"> use point, line, distance along a line identify perpendicular lines (two lines are perpendicular if an angle formed by the two lines at the point of intersection is a right angle); define parallel lines (distinct lines that have no point in common); define line segment. <p>Learning Goal 1: Use the undefined notion of a point, line, distance along a line to develop definitions for angles, parallel lines, perpendicular lines and line segments.</p>	<p>In the figure below, points B, D, E, F, and G lie in plane X. Points A and C do not lie in plane X. Check <i>all</i> statements that are true.</p>  <div> <input type="checkbox"/> The lines \overleftrightarrow{BC} and \overleftrightarrow{CE} intersect. <input type="checkbox"/> Another name for plane X is plane ABC. <input type="checkbox"/> Points B, C, and D are collinear. <input type="checkbox"/> Point D and the line \overleftrightarrow{EF} are coplanar. <input type="checkbox"/> Points A, E, and F are coplanar. <input type="checkbox"/> None of these are true. </div>

Honors Geometry

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p>■ G.GPE.B.5. Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).</p>	<p>MP.3 Construct viable arguments and critique the reasoning of others. MP.8 Look for and express regularity in repeated reasoning</p>	<p>Concept(s): No new concept(s) introduced Students are able to:</p> <ul style="list-style-type: none"> • prove the slope criteria for parallel lines (parallel lines have equivalent slopes). • prove the slope criteria for perpendicular lines (the product of the slopes of perpendicular lines equals -1). • solve problems using the slope criteria for parallel and perpendicular lines. <p>Learning Goal 2: Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems.</p>	<p>Maps Morris Avenue intersects both 1st Street and 3rd Street at right angles. 3rd Street is parallel to 5th Street. How are 1st Street and 5th Street related? Explain.</p>

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p>□ G.CO.A.2. Represent transformations in the plane using, e.g., patty paper and geometry software; describe transformations as rules that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).</p>	<p>MP.5 Use appropriate tools strategically. MP.6 Attend to precision. MP.7 Look for and make use of structure.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Transformations <p>Students are able to:</p> <ul style="list-style-type: none"> represent transformations with geometry software (Geogebra) and patty paper. describe rigid transformations as isometries (points defining the pre-image as the input and the points defining the image as the output). describe a transformation by writing a rule compare rotations, reflections, and translations to a horizontal stretch, vertical stretch and to dilations, distinguishing preserved distances and angles from those that are not preserved. <p>Learning Goal 2: Represent transformations in the plane using geometric software, describe and explain transformations as rules, and compare rigid transformations to dilations, horizontal stretches and vertical stretches.</p>	<p>Triangle RST is translated 7 units to the right and 8 units down. The result is $\triangle R'S'T'$, as shown below.</p>  <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>(a) The arrows below show that the coordinates on the left are mapped to the coordinates on the right. Fill in the blanks to give the coordinates after the translation.</p> <p>original coordinates → final coordinates</p> <p>$R(-7, 4) \rightarrow R'(\quad, \quad)$</p> <p>$S(-3, 2) \rightarrow S'(\quad, \quad)$</p> <p>$T(-8, 1) \rightarrow T'(\quad, \quad)$</p> <p>(b) Choose the general rule below that describes the translation mapping $\triangle RST$ to $\triangle R'S'T'$.</p> <p> <input type="radio"/> $(x, y) \rightarrow (7x, -8y)$ <input type="radio"/> $(x, y) \rightarrow (x+7, y-8)$ <input type="radio"/> $(x, y) \rightarrow (x+8, y-7)$ <input type="radio"/> $(x, y) \rightarrow (8x, -7y)$ <input type="radio"/> $(x, y) \rightarrow (x-7, y+8)$ <input type="radio"/> $(x, y) \rightarrow (-7x, 8y)$ <input type="radio"/> $(x, y) \rightarrow (x-8, y+7)$ <input type="radio"/> $(x, y) \rightarrow (-8x, 7y)$ </p> </div>

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p><input type="checkbox"/> G.CO.A.3. Given a rectangle, parallelogram, trapezoid, or regular polygons, describe the rotations and reflections that carry it onto itself.</p>	<p>MP.5 Use appropriate tools strategically. MP.6 Attend to precision. MP.7 Look for and make use of structure.</p>	<p>Concept(s): No new concept(s) introduced Students are able to:</p> <ul style="list-style-type: none"> identify lines of symmetry when performing rotations and/or reflections on rectangles, parallelograms, trapezoids and regular polygons. describe the rotations and reflections that carry rectangles, parallelograms, trapezoids and regular polygons onto itself. <p>Learning Goal 3: Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself, and identify lines of symmetry.</p>	<p>Reflect the figure across the y-axis. Then answer the questions below.</p>  <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p>Are the statements below true or false?</p> <p>When the figure is reflected: If two sides are parallel to each other in the original figure, then those sides may <i>not</i> be parallel to each other in the final figure.</p> <p><input type="radio"/> True <input type="radio"/> False</p> <p>When the figure is reflected, its angle measures stay the same.</p> <p><input type="radio"/> True <input type="radio"/> False</p> <p>When the figure is reflected, the final side lengths are smaller than the original side lengths.</p> <p><input type="radio"/> True <input type="radio"/> False</p> </div>

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p>□ G.CO.A.4. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.</p>	<p>MP.6 Attend to precision.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Impact of transformations on figures in the plane. <p>Students are able to:</p> <ul style="list-style-type: none"> develop formal mathematical definitions of a rotation, reflection, and translation. <p>Learning Goal 4: Develop formal definitions of rotations, reflections, and translations</p>	<p>Rotating $\triangle PQR$ by 180° clockwise about the origin, we get its image $\triangle P'Q'R'$ as shown below. Note that $\triangle PQR$ has vertices $P(3, -7)$, $Q(6, -2)$, and $R(8, -5)$. Also, note that $\triangle P'Q'R'$ has vertices $P'(-3, 7)$, $Q'(-6, 2)$, and $R'(-8, 5)$. Complete the following.</p>  <p>(a) Suppose each pair of segments below have the same length. Find each length. Give exact answers (not decimal approximations).</p> <p>$CP = CP' = \square$ units</p> <p>$CQ = CQ' = \square$ units</p> <p>$CR = CR' = \square$ units</p> <p>(b) Suppose the angles below have the same measure. Choose the correct angle measure. Use the protractor provided, as necessary.</p> <p>$m\angle PCP' = m\angle QCQ' = m\angle RCR' = ?$</p> <p>(c) Choose the correct pair of statements about the rotation.</p> <p>Not every point on the original figure is the same distance from the center of rotation as its image.</p> <p>Not all angles formed by a point and its image, with the vertex at the center of rotation, are congruent.</p> <p>Each point on the original figure is the same distance from the center of rotation as its image.</p> <p>Not all angles formed by a point and its image, with the vertex at the center of rotation, are congruent.</p> <p>Not every point on the original figure is the same distance from the center of rotation as its image.</p> <p>All angles formed by a point and its image, with the vertex at the center of rotation, are congruent.</p> <p>Each point on the original figure is the same distance from the center of rotation as its image.</p> <p>All angles formed by a point and its image, with the vertex at the center of rotation, are congruent.</p>

Unit 1 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p>□ G.CO.A.5. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.</p>	<p>MP.5 Use appropriate tools strategically. MP.6 Attend to precision. MP.7 Look for and make use of structure.</p>	<p>Concept(s): No new concept(s) introduced Students are able to:</p> <ul style="list-style-type: none"> draw the transformed figure using, graph paper, tracing paper, and/or geometry software given a geometric figure and a rotation, reflection, or translation. identify the sequence of transformations required to carry one figure onto another. <p>Learning Goal 5: Draw transformed figures using graph paper, tracing paper, and/or geometry software and identify a sequence of transformations required in order to map one figure onto another.</p>	<p>Draw the reflection of the following quadrilateral over the line p.</p>

Unit 1 Honors Geometry

<p>etc.). <i>Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.</i></p> <p>□ G.CO.D.13. Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.</p>	MP.6 Attend to precision.	<ul style="list-style-type: none"> – bisecting a segment; – bisecting an angle; – constructing perpendicular lines; – constructing the perpendicular bisector of a line segment; – constructing a line parallel to a given line through a point not on the line; – constructing an equilateral triangle; – constructing a square; – and constructing a regular hexagon inscribed in a circle. <p>• identify the congruencies underlying each construction.</p> <p>Learning Goal 9: Make formal constructions using a variety of tools (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.) and methods.</p>	<p>Use the compass and ruler to construct the bisector of the angle given below.</p> 

Vocabulary

Point, Line, Plane, Collinear, Coplanar, Angle, Acute, Obtuse, Right, Straight, Postulate, Segment, Ray, Bisector, Parallel lines, Perpendicular lines, Skew lines, Midpoint Transformation, Translation, Reflection, Rotation, Line of reflection, Symmetry, Center of Rotation, Isometry, Line symmetry, Rotational Symmetry, Center of Symmetry Protractor, Compass

Suggested Activities/Modifications

Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:

1. Activities
 - a. See Unit 1 *Suggested Open Educational Resources*
 - b. Two quizzes/one test
 - c. Desmos www.desmos.com
 - d. Open Middle Problems <http://www.openmiddle.com/>
2. English Language Learners.
 - a. Read written instructions
 - b. Students may be provided with note organizers/study guides to reinforce key topics.
 - c. Model and provide examples
 - d. Extended time on assessments when needed.
 - e. Establish a non-verbal cue to redirect student when not on task.
 - f. Students may use a bilingual dictionary.
 - g. Pair Visual Prompts with Verbal Presentations
 - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
 - a. Students may be provided with note organizers / study guides to reinforce key topics.
 - b. Extended time on assessments when needed.
 - c. Preferred seating to be determined by student and teacher.
 - d. Provide modified assessments when necessary.
 - e. Student may complete assessments in alternate setting when requested.
 - f. Establish a non-verbal cue to redirect student when not on task.
 - g. Maintain strong teacher / parent communication.
 - h. Repetition and practice
 - i. Pair Visual Prompts with Verbal Presentations
 - j. Provide Formulas
 - k. Check Use of Agenda
4. Gifted and Talented Students.
 - a. Use of Higher Level Questioning Techniques
 - b. Extension/Challenge Questions

- c. Provide Assessments at a Higher Level of Thinking
- d. Exploration Problems/Proofs

New Jersey Student Learning Standards - Technology

8.1.8.A.5 - Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

- Students can use the following website to create constructions. <http://www.mathsisfun.com/geometry/constructions.html>
- Students can use the following website to create constructions. <http://mathopenref.com/tocs/constructionstoc.html>
- Students can use Geometer's Sketchpad to find the lengths and midpoints of segments and to draw/measure angle bisectors.
- Students can research the Internet to explore artwork that shows points, lines, and planes.

Career Readiness Practices

- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP9. Model integrity, ethical leadership and effective management.
- CRP11. Use technology to enhance productivity.

9.2 Career Awareness, Exploration, and Preparation Content Area: 21st Century Life and Careers Strand C: Career Preparation

- 9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.
- 9.2.8.B.4 Evaluate how traditional and nontraditional careers have evolved regionally, nationally, and globally.
- 9.2.8.B.5 Analyze labor market trends using state and federal labor market information and other resources available online.
- 9.2.8.B.7 Evaluate the impact of online activities and social media on employer decisions.

Career & Technical Education Content Area: 21st Century Life and Careers Standards

- 9.3.ST.2 Use technology to acquire, manipulate, analyze and report data.
- 9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.
- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

Interdisciplinary Connections: The students use a paragraph proof instead of a two-column proof as a writing exercise. Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks, attending to special cases or exceptions defined in the text

Media Literacy: Students will examine the use of various forms of Geometry throughout architecture. Anticipated questions include – why was a particular form used? Was the decision structurally relevant? Culturally relevant? Students will examine and compare structures throughout the world considering both historic and modern constructions.

Global Perspective: Students will compare the architectural structures of significant buildings throughout the world. Are the chosen structures significant to that particular culture? Sample topics include Chinese/Asian architecture as compared to Greek or Roman architecture. Other samples include a comparison of cathedral architecture throughout history. The students research the work of Wassily Kandinsky, a Russian painter and art theorist. He analyzed the geometrical elements that make up every painting - the point and the line.

Unit 2

Unit 2 Honors Geometry			
Content Standards	Suggested Standards for Mathematical Practice	Critical Knowledge & Skills	Standard Mastery Examples Can be used on formative, summative, benchmark, and alternative assessments.
<p>■ G.SRT.A.1. Verify experimentally the properties of dilations given by a center and a scale factor:</p> <p>G.SRT.A.1a. A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged.</p> <p>G.SRT.A.1b. The dilation of a line segment is longer or shorter in the ratio given by the scale factor.</p>	<p>MP.1 Make sense of problems and persevere in solving them</p> <p>MP.3 Construct viable arguments and critique the reasoning of others.</p> <p>MP.5 Use appropriate tools strategically.</p> <p>MP.8 Look for and express regularity in repeated reasoning.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Dilation of a line that passes through the center of dilation results in the same line. Dilation of a line that does not pass through the center of dilation results in a line that is parallel to the original line. Dilation of a line segment results in a longer line segment when, for scale factor k, k is greater than 1. Dilation of a line segment results in a shorter line segment when, for scale factor k, k is less than 1. <p>Students are able to:</p> <ul style="list-style-type: none"> perform dilations in order to verify the impact of dilations on lines and line segments. <p>■ Learning Goal 1: Verify the properties of dilations given by a center and a scale factor.</p>	<p>Draw the image of the following triangle after a dilation centered at the origin with a scale factor of 2.</p> 

Honors Geometry

<p>■ G.SRT.A.2. Given two figures, use the definition of similarity to decide if they are similar; explain using the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides.</p> <p>■ G.SRT.A.3. Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.</p>	<p>MP.3 Construct viable arguments and critique the reasoning of others. MP.5 Use appropriate tools strategically. MP.6 Attend to precision. MP.8 Look for and express regularity in repeated reasoning.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Similarity transformations are used to determine the similarity of two figures. <p>Students are able to:</p> <ul style="list-style-type: none"> given two figures, determine if they are similar. explain the meaning of similarity for triangles. explain AA criterion and its relationship to similarity transformations and properties of triangles <p>Learning Goal 2: Use the definition of similarity in terms of similarity transformations to decide if two given figures are similar and explain, using similarity transformations, the meaning of triangle similarity.</p>	 <p>(a) Which sequence(s) of transformations will map Figure A onto Figure B exactly? Choose all that apply.</p> <p><input type="checkbox"/> Rotate Figure A clockwise 180° about the origin, and then dilate that result with scale factor 2 centered at the origin.</p> <p><input type="checkbox"/> Dilate Figure A with scale factor 2 centered at the origin, and then rotate that result clockwise 90° about the origin.</p> <p><input type="checkbox"/> Dilate Figure A with scale factor 2 centered at the origin, and then translate that result up 10 units.</p> <p><input type="checkbox"/> Dilate Figure A with scale factor 2 centered at the origin, and then reflect that result over the x-axis.</p> <p><input type="checkbox"/> None of these</p> <p>(b) Are Figure A and Figure B similar?</p> <p><input type="radio"/> Yes <input type="radio"/> No</p>
Unit 2 Honors Geometry

<p>■ G.SRT.B.4. Prove theorems about triangles. Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity</p>	<p>MP.2 Reason abstractly and quantitatively. MP.6 Attend to precision.</p>	<p>Concept(s): No new concept(s) introduced Students are able to:</p> <ul style="list-style-type: none"> construct and explain proofs of theorems about triangles including: <ul style="list-style-type: none"> a line parallel to one side of a triangle divides the other two sides proportionally; and the Pythagorean Theorem (using triangle similarity). <p>Learning Goal 5: Prove theorems about triangles.</p>	<p>In $\triangle QRS$, $\overline{QR} \parallel \overline{TU}$. Given that $SQ = 27$, $ST = 12$, and $TU = 20$, find QR.</p> 

Honors Geometry

<p>■ G.SRT.B.5. Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.</p>	<p>MP.7 Look for and make use of structure.</p>	<p>Concept(s):</p> <ul style="list-style-type: none"> Corresponding parts of congruent triangles are congruent (CPCTC). <p>Students are able to:</p> <ul style="list-style-type: none"> prove geometric relationships in figures using criteria for triangle congruence. solve problems using triangle congruence criteria (SSS, ASA, SAS, HL). solve problems using triangle similarity criteria (AA). <p>Learning Goal 6: Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.</p>	<p>Use the given information to prove that $\overline{VU} \cong \overline{SR}$.</p>  <p>Given: \overline{UR} bisects \overline{VS} $\overline{VS} \perp \overline{VU}$ $\overline{VS} \perp \overline{SR}$ Prove: $\overline{VU} \cong \overline{SR}$</p>
---	---	---	---

Vocabulary

Property of equality, addition property, subtraction property, multiplication property, division property, substitution property, symmetric property, reflexive property, transitive property, distributive property, property of congruence, two column proof, corresponding angles and their converse, alternate interior angles and their converse, alternate exterior angles and their converse, same side interior angles and their converse, triangle angle sum theorem, exterior angle, remote interior angles, SSS, SAS, ASA, AAS, HL, isosceles triangle, equilateral triangle, equiangular triangle, CPCTC, triangle mid-segment, perpendicular bisector, median, centroid, altitude, parallelogram.

Suggested Activities/Modifications

Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:

1. Activities

- See Unit 2 *Suggested Open Educational Resources*
- Two quizzes/Two Tests
- Desmos <https://teacher.desmos.com/transformations>
- Open Middle Problems <http://www.openmiddle.com/>

2. English Language Learners.

- Read written instructions
- Students may be provided with note organizers/study guides to reinforce key topics.
- Model and provide examples
- Extended time on assessments when needed.

- e. Establish a non-verbal cue to redirect student when not on task.
 - f. Students may use a bilingual dictionary.
 - g. Pair Visual Prompts with Verbal Presentations
 - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
- a. Students may be provided with note organizers / study guides to reinforce key topics.
 - b. Extended time on assessments when needed.
 - c. Preferred seating to be determined by student and teacher.
 - d. Provide modified assessments when necessary.
 - e. Student may complete assessments in alternate setting when requested.
 - f. Establish a non-verbal cue to redirect student when not on task.
 - g. Maintain strong teacher / parent communication.
 - h. Repetition and practice
 - i. Pair Visual Prompts with Verbal Presentations
 - j. Provide Formulas
 - k. Check Use of Agenda
4. Gifted and Talented Students.
- e. Use of Higher Level Questioning Techniques
 - f. Extension/Challenge Questions
 - g. Provide Assessments at a Higher Level of Thinking
 - h. Exploration Problems/Proofs

New Jersey Student Learning Standards - Technology

8.1.8.A.5 - Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

- The students use the Geometer's Sketchpad to draw and measure angles that model the relationships they learn in this unit. The students use their drawings from the Geometer's Sketchpad to create a PowerPoint presentation reviewing angle classifications and relationships.

Career Readiness Practices

- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.

- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP9. Model integrity, ethical leadership and effective management.
- CRP11. Use technology to enhance productivity.

9.2 Career Awareness, Exploration, and Preparation Content Area: 21st Century Life and Careers Strand C: Career Preparation

- 9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.
- 9.2.8.B.4 Evaluate how traditional and nontraditional careers have evolved regionally, nationally, and globally.
- 9.2.8.B.5 Analyze labor market trends using state and federal labor market information and other resources available online.
- 9.2.8.B.7 Evaluate the impact of online activities and social media on employer decisions.

Career & Technical Education Content Area: 21st Century Life and Careers Standards

- 9.3.ST.2 Use technology to acquire, manipulate, analyze and report data.
- 9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.
- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.
- 9.3.ST-ET.2 -- Display and communicate STEM information.
- 9.3.ST-ET.4 -- Apply the elements of the design process

Interdisciplinary Connections: The students use a paragraph proof instead of a two-column proof as a writing exercise.

Media Literacy: Students will examine the use of Geometric figures in advertising. Questions to be considered include –Is there significance in the figure chosen, either symbolically or figuratively? Was the selection of a particular figure intended to influence the consumer? In what ways might it influence the consumer?

<p>Ratio, proportion, cross products property, similar figures, similar polygons, scale factor, scale drawing, geometric mean, Pythagorean triple, trigonometric ratios, sine, cosine, tangent, angle of elevation, angle of depression, circle, center, diameter, radius, congruent circles, central angle, semicircle, minor arc, major arc, adjacent arcs, circumference, pi, arc length congruent arcs.</p>			

Suggested Activities/Modifications

Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:

1. Activities
 - a. See Unit 3 ***Suggested Open Educational Resources***
 - b. Two quizzes/Two Tests
 - c. Desmos <https://teacher.desmos.com>
 - d. Open Middle Problems <http://www.openmiddle.com/>
2. English Language Learners.
 - a. Read written instructions
 - b. Students may be provided with note organizers/study guides to reinforce key topics.
 - c. Model and provide examples
 - d. Extended time on assessments when needed.
 - e. Establish a non-verbal cue to redirect student when not on task.
 - f. Students may use a bilingual dictionary.
 - g. Pair Visual Prompts with Verbal Presentations
 - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
 - a. Students may be provided with note organizers / study guides to reinforce key topics.
 - b. Extended time on assessments when needed.
 - c. Preferred seating to be determined by student and teacher.
 - d. Provide modified assessments when necessary.
 - e. Student may complete assessments in alternate setting when requested.
 - f. Establish a non-verbal cue to redirect student when not on task.
 - g. Maintain strong teacher / parent communication.
 - h. Repetition and practice
 - i. Pair Visual Prompts with Verbal Presentations
 - j. Provide Formulas
 - k. Check Use of Agenda
4. Gifted and Talented Students.
 - i. Use of Higher Level Questioning Techniques
 - j. Extension/Challenge Questions
 - k. Provide Assessments at a Higher Level of Thinking

1. Exploration Problems/Proofs

New Jersey Student Learning Standards - Technology

8.1.8.A.5 - Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

- The students use the Geometer's Sketchpad to construct a right triangle. Then, they change the measures of the legs to illustrate possible measures of side lengths.

Career Readiness Practices

CRP1. Act as a responsible and contributing citizen and employee.

CRP2. Apply appropriate academic and technical skills.

CRP4. Communicate clearly and effectively and with reason.

CRP6. Demonstrate creativity and innovation.

CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.

CRP9. Model integrity, ethical leadership and effective management.

CRP11. Use technology to enhance productivity.

9.2 Career Awareness, Exploration, and Preparation Content Area: 21st Century Life and Careers Strand C: Career Preparation

9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.

Career & Technical Education Content Area: 21st Century Life and Careers Standards

9.3.ST.2 Use technology to acquire, manipulate, analyze and report data.

9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.

9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

Interdisciplinary Connections: Trigonometry has many applications in Physics.

Media Literacy: The students will research the proof by construction of the Pythagorean Theorem. They will include an explanation of the proof and accompanying drawings if necessary. Students will examine the historical and cultural significance of the Pythagorean Theorem and its influence on the mathematics world at that time

Vocabulary

Polyhedron, face, edge, vertex, Euler's formula, cross section, surface area, prism, base, lateral face, altitude, height, right prism, oblique prism, lateral area, cylinder, pyramid, slant height, cone, volume, Cavalieri's principle, sphere, hemisphere, similar solids, density, constraint, linear optimization, cost.

Suggested Activities/Modifications

Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:

1. Activities
 - a. See Unit 4 *Suggested Open Educational Resources*
 - b. Two quizzes/Two Tests
 - c. Desmos <https://teacher.desmos.com/transformations>
 - d. Open Middle Problems <http://www.openmiddle.com/>
2. English Language Learners.
 - a. Read written instructions
 - b. Students may be provided with note organizers/study guides to reinforce key topics.
 - c. Model and provide examples
 - d. Extended time on assessments when needed.
 - e. Establish a non-verbal cue to redirect student when not on task.
 - f. Students may use a bilingual dictionary.
 - g. Pair Visual Prompts with Verbal Presentations
 - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
 - a. Students may be provided with note organizers / study guides to reinforce key topics.
 - b. Extended time on assessments when needed.
 - c. Preferred seating to be determined by student and teacher.
 - d. Provide modified assessments when necessary.
 - e. Student may complete assessments in alternate setting when requested.
 - f. Establish a non-verbal cue to redirect student when not on task.
 - g. Maintain strong teacher / parent communication.
 - h. Repetition and practice
 - i. Pair Visual Prompts with Verbal Presentations
 - j. Provide Formulas
 - k. Check Use of Agenda
4. Gifted and Talented Students.
 - m. Use of Higher Level Questioning Techniques
 - n. Extension/Challenge Questions

- o. Provide Assessments at a Higher Level of Thinking
- p. Exploration Problems/Proofs

New Jersey Student Learning Standards - Technology

8.1.8.A.5 - Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

- The students create an iMovie about how to find the surface area and volume of different three-dimensional figures.

Career Readiness Practices

- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP9. Model integrity, ethical leadership and effective management.
- CRP11. Use technology to enhance productivity.

9.2 Career Awareness, Exploration, and Preparation Content Area: 21st Century Life and Careers Strand C: Career Preparation

- 9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.
- 9.2.8.B.4 Evaluate how traditional and nontraditional careers have evolved regionally, nationally, and globally.
- 9.2.8.B.7 Evaluate the impact of online activities and social media on employer decisions.

Career & Technical Education Content Area: 21st Century Life and Careers Standards

- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.
- 9.3.ST-ET.2 -- Display and communicate STEM information.
- 9.3.ST-ET.4 -- Apply the elements of the design process

Interdisciplinary Connections: Volume has important applications in Chemistry.

Media Literacy: Students will examine choices made by manufacturers about the container for a particular product. Students will consider why a cylinder or rectangular prism (box) was chosen for the product. Students will make comparison among the volume and

surface area of potential containers. Students will discuss a comparison between the need for volume (holding the product) and surface area (advertising or providing information for the product)

Global Perspectives: The largest water tank in the world is the Water Spheroid in Edmond, Oklahoma. Its diameter is 218 feet. How much water can it hold? Why did certain cultures use particular geometric figures in their structures? Topics include Greek and Roman columns and temples and Egyptian pyramids.
